INTERCOM INTEGRATED INTO WAVESYS OFFERINGS

INTERCOM INTEGRATED INTO WAVESYS OFFERINGS

The Intercommunication system aka Intercom can be a one-way or a two-way communication system used for convenience, comfort, and safety. Intercom facilitates communication between two people within the same office without moving from their desks, it helps the security staff to inform a flat owner about a visitor, and in some cases allows the visitor to directly talk to the resident of a building, all without knowing the other individual's phone number.

Every type of intercom system (hardwired, wireless, video, or automatic gate entry intercom) is widely used in both commercial and non-commercial environments. Apart from personal and official installations, independent intercom systems are being used for the benefit of the public such as information points, panic buttons, SOS stations, etc.

What help can you get by incorporating the already productive intercom with the observant CCTV systems? The audio recordings can be played either as independent recordings or in association with the cameras to give a proper and clear audio track to the cameras overseeing the scene of event.

There is the option of setting a constant audio recording and using the intercom events as a trigger to start and end CCTV recording. You can save a lot of server space without worrying about missing out on important footage.

made and rules implemented (a) to control barriers, gates, doors, and other gate equipment wherein the equipment can be opened or closed with or without human intervention, based on the video-audio combination; (b) to allow maps or other relevant pop-ups to appear on the screens of the intercom operators while receiving calls; (c) activating delay timers to every resulting action chain so no programmed reactions go waste; and whatever else you can think of.

This is just the beginning of the list of options and a conveniently pre-arranged life. Step up and enjoy!
